

ABSTRACT**Objective**

5 To provide an antistatic film, an antistatic foam sheet or an antistatic bubble sheet which has favorable physical properties, such as a continued antistatic effect and a high strength, and which causes little contamination of rollers or other devices when the sheet is formed. The antistatic film according to the present
10 invention is characterized in that it is made of a polyethylene-based resin composition containing a polyethylene-based resin and a high-polymer-type, polyether-based antistatic agent. Furthermore, the antistatic foam sheet and the bubble sheet according to the present
15 invention are characterized in that they are made of a polyolefin-based resin composition containing a polyolefin-based resin and a high-polymer-type antistatic agent.
